DETAILED ACTION

Priority

Acknowledgment is made of applicant's claim for foreign priority under 35 U.S.C. 119(a)-(d). The certified copy has been filed in parent Application No. 10-098,568, filed on 3-18-2002. *Double Patenting*

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 9-20 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-11 of U.S. Patent No. 6,676,772. Although the conflicting claims are not identical, they are not patentably distinct from each other because the current claims are merely obvious methods of using previously claimed substances. The earlier claims claim a material for use in a magnetic refrigeration system. The current claims claim a method of refrigeration which places the same material as patented in the earlier claim in a cyclic magnetic field. Magnetic refrigeration requires a changing magnetic field to function. Therefore one of ordinary skill in the art would consider it obvious to use the previously claimed magnetic

Art Unit: 3744

refrigeration material in a magnetic refrigeration device, which inherently possesses a changing magnetic field to enable the magnetic refrigeration material to function as desired.

Claims 21-32 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-11 of U.S. Patent No. 6,676,772 in view of Clark. Applicants' prior patent claims the same inventive concept, a magnetic material for use as the working substance in a magnetic refrigerator, with the material having an inflection point at which the sign of the second derivative of magnetization with respect to an applied magnetic field changes from positive to negative, substantially as claimed with the exception of using the material in an apparatus for performing magnetic refrigeration which moves the material past a permanent magnet. Clark shows permanent magnets which are moved relative to a magnetic material in a refrigeration system. It would have been obvious to one of ordinary skill in the art at the time of applicants' invention to use the material of applicants' early patent in a magnetic refrigeration system which moves a permanent magnet in relation to the magnetic material to provide an efficient roo temperature magnetic cooling system.

Conclusion .

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Okamura et al, both Gschneidner et al patents, Horimura et al, Fukamichi and Barclay '135 and '463 have been cited in the parent application. Zimm

Art Unit: 3744

et al, Hakuraku and Barclay et al '914 show magnetic refrigeration systems. Ziolo et al shows a magnetic refrigeration material.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to William C. Doerrler whose telephone number is (571) 272-4807. The examiner can normally be reached on Monday-Friday 6:30-4:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Cheryl Tyler can be reached on (571) 272-4834. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
